NEW

PLATIN RP 70 WINTER – the winter tyre for modern passenger cars and SUVs is the latest tyre in the PLATIN family.

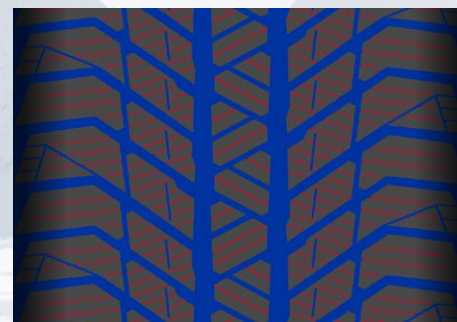

- Profile with fixed rolling direction and optimised tread compound
- Excellent handling, optimised grip and safe braking on snow-covered roads
- Safe driving on wet roads
- Outstanding handling and braking on dry roads
- Lower fuel consumption and CO2 emissions
- Available in 48 sizes, 14–19 inch

The profile in detail

Excellent handling, optimised grip and braking on snow-covered roads

The pattern structure with its high number of sipes and snow pockets can capture more snow from the ground, increasing and improving grip on snow.

Safe driving on wet roads

Numerous grip edges break up the water film during braking and cornering, so that slush and water are efficiently drained away by extra-wide longitudinal grooves and V-shaped pattern with an open shoulder design.

Outstanding handling and braking on dry roads

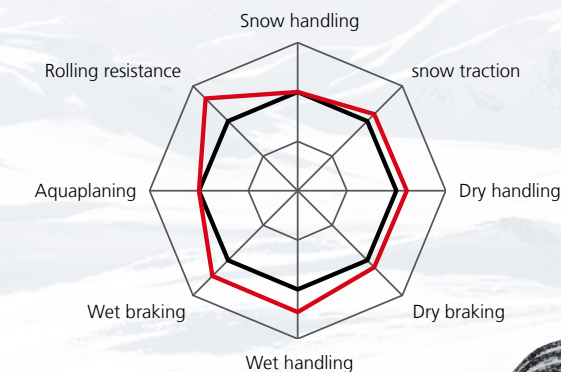

Design and sequence of lateral grooves as well as the band in the centre of the tread increase the stiffness of the pattern blocks and optimise the contact patch for better transmission of braking forces and steering precision.

Lower fuel consumption and CO2 emissions

The optimised tread compound with better deformation behaviour moves the target conflict between rolling resistance and wet braking to a high performance level.

Development priorities

— RP 70 WINTER
— RP 60 WINTER (previous model = 100 %)
